

Natural Gas: Made in the USA

Do you ever wonder where the natural gas that fuels your home comes from? Before it made it to your home, natural gas was found thousands of feet below the earth right here in America. That's right, natural gas isn't just the cleaner, more efficient choice; it's domestic too.

Ninety-eight percent of the natural gas we use in this country is produced in North America. And we can expect it to stay that way for a long time. Our nation has enough natural gas to power our country for generations to come.¹

But this domestic, abundant fuel does a lot more than just fuel our homes; it also supports our economy by providing jobs for nearly 3 million Americans in all 50 states. The natural gas industry is responsible for more than 620,000 jobs directly involved in exploring for, producing, transporting and distributing natural gas. In addition, 723,000 indirect jobs are created in industries that support the natural gas industry, such as agriculture and manufacturing. And 1.5 million jobs are supported when these direct and indirect natural gas industry employees put their income back into the economy to create demand for further goods and services.²

Oklahoma Natural Gas is proud to deliver this domestic, abundant fuel to your home, and you can be proud to know that you're using a fuel that supports millions of Americans just like you.

Rate Plan Reminder

As a reminder, you have two options when it comes to your rate plan.

Review your bill to make sure you have the rate plan that works best for you.

Oklahoma Natural Gas has two rate plans for residential customers — Plan A and Plan B. Both include a monthly service charge. Plan A is designed for customers whose annual consumption is less than 50 Dekatherms* per year. This plan includes a lower monthly service charge coupled with a delivery fee based on the number of Dekatherms consumed. Plan B is designed for those customers who use larger annual volumes of natural gas — 50 Dekatherms or more a year. This plan includes a higher monthly service charge, but does not include a delivery fee.

These plans only affect what Oklahoma Natural Gas Company charges you for service and the delivery of natural gas. The cost of fuel — the natural gas you consume — is separate and is based on the amount Oklahoma Natural Gas paid to buy the natural gas on your behalf. The company makes no profit on the cost-of-fuel component of your bill.

Oklahoma Natural Gas will select the plan that is most economical for you when you start service at a premise based on normalized annual natural gas consumption or an estimate if historical usage is unavailable. However, you are entitled to select the other option should you believe that it will better suit your needs.

More details about these plans (including the specific service and delivery charges as well as details about rate plans for other classes of service) are available on the Customer Care page under the Rate Information and Tariffs tab at www.oklahomanaturalgas.com. For more information call Oklahoma Natural Gas at 800-208-7267.

*A Dekatherm (Dth) is a measure of energy content. One Dekatherm is the approximate energy content of 1,000 cubic feet of natural gas.

Ingredients:

- ¾ cup sugar
- 2 tbsp cornstarch
- 2 tbsp light corn syrup
- 1 cup water
- 3 tbsp strawberry gelatin
- 1 quart fresh strawberries
- 1 (9-inch) pie shell, baked

Directions:

Combine sugar, cornstarch, corn syrup and water in a saucepan; bring to boil over medium flame. Cook, stirring constantly, until clear and thickened. Add gelatin, stirring until dissolved. Cool. Place strawberries in a pie shell; pour in gelatin mixture. Chill until firm. Makes 6 servings.
